

# NORDIC PUMP

Fixed-displacement gear pump

Ball-type check valve

## The Ultimate Pump

The Nordic Pump can handle it all. This heavy-duty pump takes less than 20 minutes to pump the contents of a 45-gallon drum into a system, even while the system is in operation. Ideal for changing or adding oil to large systems or for any oil transfer, the Nordic Pump features a 1/2 HP electric motor directly coupled to a fixed-displacement-gear pump and a ball-type check valve at the pump outlet that prevents oil or refrigerant from flowing back in case of a power stoppage.
